Introduction
The CCNP Security SITCS exam topics have been refreshed from version v1.0 to version 1.5. The new exam topics and domains have been updated to reflect the addition of the current Cisco Firepower NGIPS and Cisco Advanced Malware Protection and coverage of retired products has been removed. The 300-310 SITCS exam curriculum has been reduced overall, from six to five domains. While there are fewer domains, the exam remains the same in length and number of questions. The domains better reflect current job roles and tasks required in positions typically held by CCNP Security Certified individuals.

The 300-207 SITCS v1.0 exam will be retired effective March 31, 2016. From September 20, 2016 thru March 31, 2016, candidates can choose to take either the 300-207 SITCS v 1.0 exam or the 300-210 SITCS v 1.5. The new exam is aligned with the new course revision, Implementing Cisco Threat Control Solutions (SITCS) v1.5.

To assist you in this transition, this document will highlight the changes made between the two exams. The acronym and name will remain the same for both the new course and exam.

Summary:
The new SITCS exam topics and domains have been updated to reflect the addition of the current Cisco Firepower NGIPS and Cisco Advanced Malware Protection and coverage of retired products has been removed. The 300-310 SITCS exam domains have been reduced overall, from six to five. While there are fewer domains, the exam remains the same length and includes the same number of questions. The domains better reflect current job roles and tasks required in positions typically held by CCNP Security Certified individuals.

Overview of the Changes:
- Coverage for the retired Cisco Adaptive Security Appliance (ASA) CX Firewall Module has been removed
- Coverage of Cisco Legacy IPS has been removed
- Coverage has been added for Cisco Firepower Next Generation Intrusion Prevention System (NGIPS)
- Coverage has been added for Cisco Advanced Malware Protection (AMP)
